EDUCATION

2024 -Present

FACULTY OF AUTOMATIC
CONTROL AND COMPUTERS
CTI Profile

- I am a second-year student and among the top performers in my faculty.

2020-2024

TUDOR VLADIMIRESCU
NATIONAL COLLEGE

- Romanian Baccalaureate: 10/10 in Physics; strong performance across all other subjects.

SKILLS

- Strong knowledge in : C/C++, Java, Html, Matlab, Scala
- Good knowledge in : Python, JavaScript, Haskell
- Technologies: GitHub, GitLab, Ghidra, VSCode, Cursor, IntelliJ IDEA, VMware

PROFILE

Motivated Computer Science student with a strong passion for Artificial Intelligence and its transformative impact on efficiency and performance. I am highly ambitious, proactive, and driven by continuous improvement, always aiming to exceed expectations and deliver innovative solutions. With solid problem-solving abilities, a keen analytical mindset, and a commitment to learning, I approach every project with professionalism, creativity, and a focus on achieving excellence.

PERSONAL PROJECTS

TicketHub

JAVA, GIT, GITHUB, INTELLIJ IDEA, LINUX

- Software Architecture: Implemented Builder, Strategy, Factory, and State patterns to manage complex ticket lifecycles and intelligent resource allocation.
- Resource Management: Developed a filtering engine to match developers to tasks based on expertise, seniority, and availability.
- Access Control: Integrated a role-based permission system (Manager, Developer, Reporter) with secure data persistence in JSON format.
- Code Quality: Ensured 100% compliance with Clean Code standards and rigorous data validation.

Browser

C, MAKE, GIT, GITHUB, VSCODE, LINUX

- Implementing an efficient browser resource management system using complex data structures.
- Data structures: Circular doubly linked lists (tab management) and Multiple stacks (per-tab browsing history).
- Features: New Tab, Close Tab, context switching (Next/Prev), history browsing (Back/Forward) and resource download.

Transpiler C-to-ASM

C, GIT, GITHUB, VSCODE, LINUX

- This project is a simplified translator (transpiler) that converts code written in a subset of the C language into x86 assembly instructions. Its purpose is didactic, illustrating how fundamental control structures ('if', 'while', 'for') and basic arithmetic operations are translated into assembly language.

RELEVANT CERTIFICATES AND COURSES

- Data Structure and Algorithms
- SQL Fundamentals Certificate – Oracle Academy
- Computer Programming and Programming Languages
- Object-oriented programming
